Front-end assessment: Quiz

Create a ReactJS application (IMPORTANT!!! You must use react hooks). The application is a quiz with questions about countries, languages and continents. You are free to use your own creativity. As an example, you can use "Who wants to be a millionaire".

Please comply with the following requirements:

- At least 10 randomized questions.
- At least 2 types of questions (shown randomly throughout the quiz).
- Questions must be multiple choice. Four answers each question.
- Use this country GraphQL API as backend (https://countries.trevorblades.com/graphql)
- Results must be saved in the local storage of the browser.
- There must be a results/leaderboard overview so I can see the scores of other opponents.

Create this awesome quiz with your own styling or use a framework of your choice (we use https://ant.design/). Feel free to implement extra functionalities or animations.

Create React app: https://github.com/facebook/create-react-app
React docs: https://reactjs.org/

Upload your project on Github or send a zip-file.

Good luck!
